It is renowned for its spectacular series of landforms, namely the yardangs (massive corrugated ridges). The yardangs are so large and impressive that they can be seen easily from space. Lut is particularly significant for the great variety of desert landform types found in a relatively small area. The yardang/kalut landforms are widely considered the best-expressed in the world in terms of extent, unbroken continuity, and height. The Lut sand seas are amongst the best-developed active dune fields in the world, displaying a wide variety of dune types (crescentic ridges, star dunes, complex linear dunes, funnel-shaped dunes) with dunes amongst the highest observed anywhere on our planet. Nebkha dune fields (dunes formed around plants) are widespread with those at Lut as high as any measured elsewhere.
